

**Company Name:** BEST Spinach, Inc.

**Company Address:** 12345 Leafy Road  
Sunny Ville, CA 91531

**Product Description :** *BEST's Fresh Cut Baby Spinach* in re-sealable environmental controlled packaging

**Method of Storage and Distribution:**

The *BEST's Fresh Cut Baby Spinach* is stored in temperature controlled refrigerator units. The spinach is distributed via company refrigerator trucks.

**Intended Use and Consumer:**

*Delicate, Early-Picked Baby Spinach*  
*BEST's Fresh Cut Baby Spinach* is intended to be used in salads, sandwiches or can also be cooked.

Best's Spinach consumers are retail grocery store shoppers

**Name:** Tiffany Wilson **Title:** Director of Quality Control **Date:** 09-23-09

**Name:** Louisa Bayoud **Title:** Quality Control Manager **Date:** 09-23-09

**Name:** Eva Star **Title:** Quality Control Inspector **Date:** 09-23-09

Net Wt.  
6 oz. (170 g)

**FRESH**  
Thoroughly Washed  
Ready to Eat!

No Preservatives

# BEST Spinach, Inc.

## INGREDIENT ANALYSIS FOR POTENTIAL HAZARDS

INGREDIENTS	HAZARDS Biological Chemical Physical	LIKELIHOOD OF OCCURING	COMMENTS (Preventative measures)
SPINACH	<b>Biological:</b> * Human * Cooling *Washing, rinsing * Storage (i.e. pest)	High	- Sanitation training - Time, Temperature, Humidity - Water control (i.e. potable standard) - Pest control program, monitoring and application of chemicals.
	<b>Chemical:</b> * Pesticide	Low	-Verification of residues and withholding periods and residues
	<b>Physical:</b> *Dirt, wood pieces, stones, metal *Equipment, i.e conveyor belt	Medium  Medium	-Washing procedure, and detection of foreign substances during processing, - Maintenance of equipment, repair and chemical use for cleaning of equipment.
WATER	<b>Biological:</b> * Pathogens in water	High	- Sanitation schedule, cleaning of pipes and water compliance
	<b>Chemical:</b> * Pesticides	High	- Measurement of sanitizing and chemicals
	<b>Physical:</b> * Irrigation	Low	- Check system for deterioration of piping.

## Process Analysis Plan

Step	Process Step	Hazard Type / Possible Hazard?	CCP?	Preventative Measures Taken
1	Soil Preparation and Machine Harvesting	<b>Biological:</b> - Pathogens from the soil and the water, or past loads in machine <b>Chemical:</b> - Residue from the pesticides used, or chemicals from the harvester <b>Physical:</b> - Objects from the field (stems, rocks, insects, etc), or broken parts from the harvester	YES	<i>(Some will be addressed at the processing facility, but the machine that is used to harvest will need to be addressed at the farm.)</i> - Clean the harvester after every load (bins, etc.) - Keep the harvester's maintenance (log book, mechanical) up to date - Train all personnel that use the harvester
2	Receiving	<b>Biological:</b> - Pathogens from the soil <b>Chemical:</b> - Residue from the pesticides used, over use of chemicals to rise produce <b>Physical:</b> - Objects from the field (stems, rocks, insects, etc)	YES	- Rinse produce with cleanser to remove pesticides or pathogens - Having a list of pesticides to check for - Visual check done in subsequent steps
3	Storage	<b>Biological:</b> -Growth of pathogens due to poor temperature or humidity control, and inadequate pesticides <b>Chemical:</b> N/A <b>Physical:</b> N/A	NO	<i>*These are addressed by prerequisite programs</i> - Know the pesticide used, and the levels - Know the levels that the produce should be stored - Keep records
4	Rinsing/ Washing	<b>Biological:</b> -Water not being filtered accurately <b>Chemical:</b> - Over use of chemicals <b>Physical:</b> - The items used in the filtration system	YES	- Measuring of the chemicals used - Keeping a log of the amounts and types of chemicals used - Training the personnel <i>*Chemical hazard only</i>
5	Sort (Visual)	<b>Biological:</b> - Pathogens introduced by bad personal hygiene by sorters <b>Chemical:</b> - improper cleaning of the surface used for sorting	NO	<i>*These are addressed by prerequisite programs</i> - Making sure GLP & GMP's are adhered to - Proper strength and type of cleanser for the surfaces

## Process Analysis Plan

Step	Process Step	Hazard Type / Possible Hazard?	CCP?	Preventative Measures Taken
		<b>Physical:</b> - Items worn by the sorters falling into the produce		
6/9	Metal Detection	<b>Biological:</b> - N/A <b>Chemical:</b> - N/A <b>Physical:</b> - Broken machine	YES	- In sure proper maintenance be done (records, calibration, etc.)
7	Packing	<b>Biological:</b> - Pathogens introduced due to bad personal hygiene of packers; improper storage areas; <b>Chemical:</b> - Pest control <b>Physical:</b> - N/A	NO	- Making sure GLP & GMP's are adhered to - Know the levels that the produce should be stored - Keep records
8	Labeling	<b>Biological:-</b> N/A <b>Chemical:-</b> N/A <b>Physical:-</b> N/A	NO	- No hazard
10	Cold Storage	<b>Biological:</b> -Growth of pathogens due to poor temperature or humidity control, and inadequate pesticides. Growth of pathogens due to poor temperature or humidity control.	NO	<i>*These are addressed by prerequisite programs</i> - Know the temperature that the produce should be stored - Keep records
11	Transportation vendors	<b>Biological:</b> - Growth of pathogens due to poor temperature or humidity control Growth of pathogens due to poor temp. or humidity control.	NO	<i>These are addressed by prerequisite programs</i> - Know the temperature that the produce should be transported - Keep records
12	Pest control in all areas of processing and delivery	<b>Chemical:</b> - Pesticides	NO	- Pest Control Program in place, with records of monitoring, sightings logs, and application of chemicals.
